Hello,

I need advices to curb a crank who believes in Earth expansion pseudo-theory.

Grasshopper, you know nothing. May I suggest that before you go expressing YOUR opinion that you do your homework and actually quantify your statement by providing factual evidence to disprove EE.

Grasshopper eater, before you attempt to tell others what they should and should not do, perhaps you should point out how the rules have changed such that people who support the current established paradigm are required to prove or disprove anyone else's theory. It is for EE supporters to provide not only a theory that better explains the facts than does plate tectonics and make testable and repeatable predictions from that theory, it is also up to EERs to provide such an explanation in such a manner that it is falsifiable, testable, and repeatable by others. Well? We are still waiting, Mr. Maxlow, if that is truly who you are?

George
