Yes, but is such understanding within the average run-of-the-mill sci000ntist ?

Sir Francis Galton at the Universal London Fair of 1851 conducted a survey which consisted of 2 questions put to visitors.

These questions were :

- 1) Do you dream in colour
- 2) Do you dream in 3D

The result of such investigation was interesting since it demonstrated that only a small proportion of people dream in colour & 3D ( with the flying dream being specific of some cultures by the way ) & further demonstrated that some who did thought that this is was a common trait of all people.

So, what makes you think, you Don Findlay, that all people of the world have your superior level of intelligence & awareness ? ... Don't you realise that retards like Stu or Georges (s since being French) take exception of your insight which indeed their little narrow minds are unable to reach ? don't you realise that it is completely beyond those people's scope of understanding to realise their thought-masters ( the ones who formatted their brain in Universilities ages ago )  
COULD BE WRONG ?

Really !

Of course they know they're wrong. They know perfectly well the game of consensus. Or if they didn't they certainly do now. Why else do they blame the victims? – the poor teachers <<http://tinyurl.com/2xmdss>> who can't make head nor tail of all the contradictions they are supposed to 'teach'.

## Re: Plate Tectonics and Earth expansion

All the people who head up this Plate Tectonic bandwagon think themselves Popes, but they are in reality charlatans, reducing poor Jo there to only feeling competent talking about walking sticks and knitting and pencil sharpeners, and all the teachers in the classrooms to idiots laughed at by their students for not knowing whether mountains are built by plate crumpling (like the Himalayas) or hi-lifted
