Steve,

You may find your home location is already set on the quest – I managed to accidentally set mine and then found I couldn't change it.

You have to (for some reason – any ideas anyone?) delete the location that the quest thinks is the current home location, then the 'set home location' menu option appears again.

Of course, this means that you need to re-enter the location that you use as home as it's now gone . . .user friendly it ain't!

(to find the current home location – or the one that the quest thinks is home, try using the 'route home' option – or hold down the 'find' key and see where it routes to)

Some of the quest routing options e.g. divert/recalculate are only available when it's following a route.

I have all of England/Scotland/Wales with full auto-routing info loaded into my quest (City Select 6). I haven't got the size to hand, but I think it's more than 115Mb.

Regards,

Andy
