QUOTE

The Canadian Geodetic Service of Natural Resources Canada, as provider of the Canadian Spatial Reference System (CSRS), is pleased to announce the availability of a new on-line service for GPS users. CSRS-PPP (CSRS - Precise Point Positioning) allows GPS users in Canada (and abroad) to recover more accurate positions from a single GPS receiver by submitting their observed data over the Internet. The resultant precision can approach that of phase-differential GPS but without the need to access or process data collected simultaneously at a base station or to ensure that the coordinates of the base station are properly referenced.

Does anyone have experience with this service?
