*>Your word has been marked and I have no doubt that this will be true.*

*You're*

*>pretty much stating the obvious but what you don't want to accept is that*

*>not everyone needs/wants these things combined into one product.*

I agree to this to an extent. Look at a calculator nowadays compared with a desktop. I must say a dedicated calculator may be better off under certain circumstances. 99% of the other circumstance, a computer will prevail. I can also say that a dedicated gps is almost a must for marine, topographical and aviation use. For automotive, it can be done in a lot cheaper and efficient manner.

A gps is just another comp (with its harddrive, memory card, memory, cpu, motherboard, vdo card, sound card, display.....) . With huge advance in the computer field, dedicated gps looks more like where a dedicated calculator goes.

*>I'm not sure what your point is here unless you're trying to sell something?*

I am selling the point that I have just made knowing that this newsgroup is suffocated with incessant sales pitch re dedicated gps hardware/software. And we all know which companies dominate.
