Help and ideas needed please!

I've got:

Microsoft Streets & Trips 2005 (with the improved GPS support);
Garmin GPSmap 60C (with serial and USB PC cables);
IBM Thinkpad laptop (with no serial port!).

S&T only looks for a connected GPS on serial ports, it won't recognize anything connected to a USB port. Well, you see the problem... without a serial port on my laptop, the software and the GPS can't communicate.

Any ideas?

Will Microsoft provide an upgrade?

Any recommendations on a Serial/USB converter? (I'm leery of the drivers that would need to be installed.... messing other things up).

BTW, nowhere on the S&T packaging is this restriction made clear.

Thanks!
