I've been fairly happy with tomtom's navigator 2004 product on my tungsten t3. it includes usa/canada maps and a bluetooth gps receiver. They have just recently released the navigator 5 product so you should be able to find the 2004 product at a decent price, and perhaps with a free software upgrade option.

navigator 5 includes updated software and maps, and also a revised receiver that is said to be smaller and more sensitive. I have no experience with that hardware or software and so can't say anything good nor bad about it.
