OK, maybe something got lost in the thread.  
My laptop does not have a serial port. S&T requires one to  
communicate  
with my GPSmap 60c. Why do you mention a USB mouse (what will  
that do  
for me?). I'm guessing you know something I don't, but I don't  
understand your solution.

My Garmin GPSmap 60C has serial and USB. My laptop only has USB.  
S&T  
requires a GPS connected to a serial. It's the laptop middleman  
that's  
causing the problem (I think).

Thanks Daniel, and Marvin,  
Pink
