For what you need, if you do have a notebook computer in your car, I think you would be happier with one of the USB units for the computer. I started out with an earthmate unit on the notebook. Ive worked my way up through several hand held units, and I now have a 2610 in my car, just for basic navigation in my car and on motorcycle. If I really needed to do things like you're talking about, Id go right back to the notebook and \$100 USB. Even the high end GPS units cant compare in features, ease of use, etc..
