

Garmin Quest 2 – All of North America Built In? How is this possible?

Who has info on this new Garmin City Select NT? How can they possibly fit all of the US and Canada on a ~100MB of internal flash memory for the Quest 2 (which I understand is just the european quest with its 200+MB of ram loaded with City select NT)? If you ask me its HAS to be missing a ton of detail that the regular city select and its huge database have.

Could they have added more memory to the Quest to handle 600MB or so of detail map data for the US and Canada?

Any theories? How has Garmin pulled of such a feat without giving us a partial product?

.
