Note with BT afaik but it can be done by using a cable serial splitter sold  
at [www.pc-mobile.net](http://www.pc-mobile.net)

Another way to do it might be by using a PDA to receive your BT signal, then  
resend the NMEA by serial cable, use the pc-mobile splitter and feed the  
two PCs. I believe this could be done on a palm with BT, such as a Palm  
Tungsten, using JMckie's software Birdwatch. Search for Birdwatch on the  
Garmin forum on [www.bargainpda.com](http://www.bargainpda.com).

BTW, I'll make a thread about this question on the forum.
