Thanks for the reply, yes I was totally wrong thinking it could be done with GPSSGate Maybe the easiest way would be buying another GPS :-).

So the situation is that you have one Bluetooth "sender" (the GPS) and two Bluetooth "receivers" (the PDAs) and the sender will not communicate with both PDAs simultaneously? It that right?

I thought a Bluetooth "piconet" allowed duplex communication amongst multiple devices.

I don't know much about Bluetooth, I only use it to connect one device at a time (PDA and cell phone) to my PC.
