Looks like Tesco are considering using CoPilots new live professional GPS software with their FleetCentre everyone's been talking about. It means it will allow customers to track the geographic location of the delivery van carrying their on-line shopping! There's an article about it

here:[http://www.globalpositioningsystems.co.uk/news\\_article.php?article\\_id=515](http://www.globalpositioningsystems.co.uk/news_article.php?article_id=515)  
i hope they do implement it, and not just in London.

From experience I can tell you that it won't necessarily improve

delivery times. An experienced driver who know's their area will almost always beat a Sat-Nav and over the course of a route definitely always.
