With one Motorola E1000 at the hand, I am interested in applications combining Google Maps, GPS and mobile Internet. Any successful efforts so far?

Depending on what you're planning to do with your GPS and mobile Internet, you might want to look at the Google Maps API terms of use.

<http://www.google.com/apis/maps/terms.html>

In particular, section 1.4, which says in part:

In addition, the Service may not be used: (a) for or with real time route guidance (including without limitation, turn-by-turn route guidance and other routing that is enabled through the use of a sensor), or (b) for, or in connection with, any systems or functions for automatic or autonomous control of vehicle behavior.

.
