I'm looking for a web page that will give me a zip code from a latitude and longitude. Would be better if it was a wap page. I'd like to be able to find out what zip code I am in from my mobile phone. It has GPS. Is there a better group to ask this question in?

In UK <http://www.streetmap.co.uk/> will give you that information. I don't know if it's usable with a mobile phone though. Other sites may be available for other countries.

Stefan
