Since a recent update of MapSource, I can no longer launch it: the program says that the datas of my City Navigator Europe v8 are more than one year old, then quit...:-(

Is it a normal behaviour, making that I cannot use the program at all with or without the cartographies I owned previously, even they are not up to date:

No Map
Trip and Waypoint Manager v2
European City Select v6
BlueChart Atlantic v6.5
City Navigator Europe v8

Or must I use only the 6.5 version of MapSource now, which is installed too on my disk, and which have not this problem...?

Probably your version of Mapsource is too old (the program itself, not the maps). Current Mapsource version is 6.11.6

Download the lastest version from Garmin.
