Happy Trails <nomail@xxxxxxxxxxxx> writes:

If it is just a game to you, go somewhere you want to be reported at, and let the phone have a good view of the sky for a while before placing the duct tape over the antenna location. With any luck it will henceforth report this "last known position" any time it is queried.

More likely, it will report "no GPS position available" or something like that. If he "vanishes" like this occasionally, anyone monitoring will assume he's inside a parking garage. If he's unlocated most of the time, they'll assume his phone is broken or he's actively trying to hide.

Remember to remove the duct tape and all traces of glue when someone in the office wants to check your phone to see why the gps is not working right.

After they replace it a half a dozen times and it still will not work, they will declare you a gps nogo zone and give up trying track you.

Unless they're incredibly dense, they'll figure out he's intentionally defeating the system. How much that matters depends on his company.

Either that or they'll just replace you!

That's one "solution".

The fundamental problem here is that the original poster thinks that one of the conditions of his employment is that he is free to go wherever he wants when he wants as long as he makes his quota, while his employer

Re: gps and wi fi

thinks that they are entitled to track their salespeople via this tracking device. At least one of these two must be incorrect, and it might be worth him having a conversation with his employer to clarify that.
