Opening a gdb document with the new version of mapsource  
6.13.1  
forgiveness the formulations of the language?

gdb opens for me in Mapsource 6.13.1.

What are .gdb files used for?

All I could find was:

"GDB is the file extension for the Database file associated with  
InterBase."

..gdb is the default file type when you save a MapSource file with maps,  
routes, waypoints and tracks. It probably stands for Garmin database?
