Has anyone else detected this problem, or is it only on my PC?

Start GE, and zoom to the eastern parts of Switzerland – e.g. 46 40N 9 50 E. When the altitude is approx 30 km (or less), GE suddenly crashes.

So far I have detected this problem only on this part of Switzerland – near Davos and St. Moritz. It occurred first time only couple of days ago, after I had downloaded the latest update ("4.3.0180.1134 (beta)").

I also have got lots of error messages with "virtual function call" (or something similar), when tilting somewhere on Alps.
