I have a NavSync CW19 GPS receiver which uses a Ceva chipset. I would like to know the difference between Sirf Star family chipsets and other chipsets available. Is a receiver which uses Sirf Star chipset more accurate than other receivers?

me too!

I'm trying to choose a good handheld for me and I can't decide between the "GPSMAP 60CCSx" and the "eTrex Vista HCx" due to this 2 questions (that [www.garmin.com](http://www.garmin.com) fails to answer):

- how does the Sirf Star III compares to the MediaTek ?
- how fast is the processor in both units?

other that that I think the Vista wins:

<https://buy.garmin.com/shop/compare.do?compareProduct=8703&compareProduct=310>
