Hi there.

I'm now considering a small project that a user is able to find a man or a woman who is a ideal type of the user base on movie or sport star's pictures posted by a user.

I hardly find anysite serving that system in my country.

I wanna try to googling. But because of my poor English, I cannot make head nor tail at this time of day.

In a sense, put it simply,

Could you tell me where sites providing that service are?

In addition, please let me know libraries to be needed to construct that system~~! : )

I'll appreciate your help.

.
