That's right.

Looking at the source code of <http://www.ana.co.jp/citynavi/i/0603.html>,

you'll find:

```
|<a href='http://homerun.wni.co.jp/anam/i/6900a.html' accesskey='1'>&#63879; $BE75$ (B</a><br>
|<a href='060301.html' accesskey='2'>&#63880; $B4Q8wCO>pJs (B</a><br>
|<a href='kansai.html' accesskey='3'>&#63881;ANA $B%[%F%k%:>pJs (B</a><br>
|<a href='060302.html' accesskey='4'>&#63882; $B1X$9$Q$"$H (B</a><br>
|<a href='060303.html' accesskey='5'>&#63883; $B6u9A%"%/%;%9 (B</a><br>
```

These all characters are i-mode gaijis. see:

<http://www.nttdocomo.co.jp/mc-user/i/tag/emoji/list.html>
