On day Thu, 10 Feb 2005 15:35:11 +0000 looked the Lord upon his prophet, and the prophet was numbered among those called Paul Blay. And thus spake the prophet:

- > *I tend to ignore Unicode for a practical, if trivial, reason.*
- > *I, and probably a lot of the Microsoft crowd at least, resort to*
- > *"Japanese (Auto-select)" as the first choice when trying to view*
- > *Japanese text. Unfortunately that won't work if the text is actually*
- > *in Unicode. There's no particular difficulty in selecting Unicode (UTF-7)*
- > *and Unicode (UTF-8) afterwards to try them but the fiddle bugs me.*

Umm, name one site that uses UTF-7? I can't, for sure. And, with this simple constatation, you can reduce your click count by impressive 50%.

Cheers,
Maciej
