may not be 8("W but it isn't in the JIS X 0212 extension and it's those that cause trouble. Incidentally they also cause trouble with OE – it will not post them in any "Japanese" encoding only so you need to choose Unicode.

This is good to know. I'll be careful not to post with out of the way characters without testing them first. As you can see with some of my most recent posts, I've started to use 40tude Dialog. I'll so some tests on misc.test with characters outside the JIS X 0212 extension when I have the time.

Hmm, have you got your "outside" and "inside" mixed up?

Sorry about that. You're right. I was going to say it one way then decided on the other and mixed up the two contexts. I should have said in the JIS X 0212.
