I m happy to say Google does natural language processing, yes. Cf. the big different in results between these two queries:

<http://www.google.de/search?q=bart&hl=de>
<http://www.google.ca/search?q=bart&hl=en>

I see. The natural language processing of google is the reason for a Flemish site in the search result;-)

I m not sure why one would question it without heavy personal investment in pre-AI-winter-based approaches to NLP.

Google tries to guess the main language of a page (and fails often). Thats all. No magic.

Where can I buy this technology, or some development of it? Or did it turn out to be unmarketable, since there was such a strictly limited subset of German understood by it that phrasing the cases was not any easier than formulating SQL queries?

The cases can be entered in natural language.
