Herc, don't let these guys bother you. You may be sick, and in fact I think you are very sick, but when you are feeling well you are interesting and creative. These guy's tired old cliché flames are uniformly and consistently boring.

"Consistently boring" is my definition of Hell. Eh?

Besides being intollerably boring, they appear to be heartless bastards to most readers, and you appear to be the victim. The more they do it, the more clueless they look, and the better you look. So just sit back and watch them make fools of themselves.

Like Simon, I'd like to apologize for how I flamed you in the past.

It's necessary to let posters know you are sick sometimes, but we certainly don't need to do it 30 times in a row and we certainly don't need any help from these clueless outsiders. I'll try to be more thoughtful in the future.

You know that there are several people in sci.logic who feel as I do, and the great majority of people in real life do too, so please take heart that we understand your predicament and hope you can feel well a lot more often in the future. We would always like to read your posts when you are feeling well, and many posters here have had profitable exchanges with you.

Thanks for the probability idea about a real-world solution to

sci.logic: Re: sliding window

the Halting Problem recently when you were feeling well. Of all those who talked about that in real-world context, you had the best idea in my opinion. I think that was a major contribution, and I am sure I will be able to use that idea someday.

Larry
