Consider, for example, the possible situation in which  $\sim GC$  is arithmetically (interpreted to be) true, while  $GC$  is \*also provable\* in Shoenfield's 'N' formal system.

That situation is "possible" only in the sense it's "possible" we're mistaken about pretty much anything, being in reality delusional disembodied brains in vats.

I don't worry so much about being a brain in vat as I do about the vats in my brains.
