WM says...

Assume you are dreaming. You have a nightmare. Is it possible to prove by logic that you are dreaming? No. Some realms simply are unaccessible to logic, in particular such that do not exist – like the nightmare of completed infinity.

I think that you've got this analogy backwards. *You* are dreaming, and it is impossible for anyone to prove to you that you are dreaming. You don't have the competence to construct or even follow a logical proof.
