Psychotic ineducable spamming idiot,

You see yourself this way,

<http://www.mazepath.com/uncleal/effete6.jpg>

The entire remainder of the planet sees you this way,

- 1) Tell us, stooopid, how to build a capacitor that accumulates energy uphill in violation of the First Law of Thermodynamics.
- 2) Tell us, stooopid, how to build a capacitor whose energy density storage exceeds the ΔG of formation of a diamond lattice. What then holds it together atom by atom?
- 3) Tell us, stooopid, how to pattern a a kilogram of folded single-atom thick plate at 1/1000 atom size without any volume-occupying support.

4) Tell us, stooopid, how to build a real world AA-cell sized capacitor with the energy content of a AA-cell size alkaline battery. It can't be done. An AA-cell stores about 4000 joules in about 5 cm³. A maxed out 5 cm³ capacitor would at most store 1 joule.

<<http://electrochem.cwru.edu/ed/encycl/art-c03-elchem-cap.htm>>

5) Tell us, stooopid, how to build a D-cell sized capacitor with the energy content of the same mass of gasoline. Remember to invent new physics when you do it – starting with conservation of energy.

6) Tell us, stooopid, who fills the capacitor with energy?

7) Stooopid and ineducable; psychotic perseveration; negative intelligence – any attempt to remediate results in additional intransigence.

Density of energy generation/mass

-
- 13) matter antimatter annihilation
 - 12) nuclear fusion
 - 11) nuclear fission
 - 10) Radioisotope thermoelectric generator
 - 9) Diesel internal combustion
 - 8) kerosene internal combustion
 - 7) gasoline internal combustion
 - 6) lithium hydride battery
 - 5) nickel metal hydride battery
 - 4) lead acid battery
 - 3) flywheel
 - 2) capacitance
 - 1) inductance
