I am struggling to find a electronic materials/physics job in the Columbus, OH area for a new PhD grad. I initially thought that because of OSU and Battelle I'd be able to find a few startups, but so far no luck. I'm interested in flexible solar cells and other types of thin films, but I'd take anything in this area that was challenging with decent pay.

I'm trying to stay in the same area as my fiance' (we are getting a fabulous introduction to the fun of being a two-career family) so ANY ideas would be appreciated.

My first suggestion would be to look up local chapters of technical societies like ASM International at <http://www.iwaynet.net/~asmcolumbus/> Chapter officers usually know what is going on and who might be looking for people.

For smaller start-up firms job listings might be on Craig's list (rather than expensive national listings) so see: <http://columbus.craigslist.org/>
