Bringing back the HP15C is an interesting idea. It is indeed a wonderful calculator.

Concerning battery life, you say "They will run the 15C for over a year, many have gone more than 10 years on the same set of batteries." Well, perhaps you'd be interested to know that my 15C's are still running on their original batteries! (Of course, the fact that I have more than one 15C and the fact that I don't use calculators much at all nowadays surely have something to do with the long battery life I've witnessed.)
