Can someone help. thanks

Certainly, your instructor can; if you approach him/her/it and explain your reluctance to do your homework yourself to his/her/it satisfaction, he/she/it may do it for you.

question:

$\langle \text{exp} \rangle ::= \langle \text{int} \rangle | \langle \text{exp} \rangle \langle \text{op} \rangle \langle \text{exp} \rangle$

$\langle \text{op} \rangle ::= + | *$

is ambiguous. Rewrite the grammar so that it accepts the same language unambiguous and honors the traditional interpretation of arithmetic expressions. Using your grammar, provide a derivation of the expressions: $2*3+5*4$ and $2+3*5*4$
