

Solving a large sparse system with a single dense row/column?

Source: <http://sci.tech-archive.net/Archive/sci.math.num-analysis/2008-05/msg00074.html>

Are there any tricks for efficiently solving large systems of equations which are very sparse except for a single dense row / dense column? I'm interested in methods for both symmetric and non-symmetric matrices.

Thanks,

Trevor
