

sci.math.symbolic: Minimum of a matrix.

Minimum of a matrix.

URGENT:

Is there any way to find the indexes of the minimum element of a matrix in MathCAD 2001? The min() function only finds the minimum value without giving me the indexes. What is the quickest and easiest way to do it? I don't want to write a separate subroutine to do it because time is a crucial factor in my application. Please help.
