Additionally,

Although I said that I generally understand domains and categories, I become overwhelmed when I look at the documentation of them. The issue is that although a high level overview of the functions they encompass is given, I would care to see examples like are given in the standard library documentation. Without examples, I feel lost. Perhaps what I need to do is to look at the domain and category library code itself as documentation. Seems like a low level approach, but in the absence of alternatives, that is probably what I will need to do.

.
