the only ignorance displayed forever is yours – shown by your arrogant and unhelpful attitude. all you have told the OP is to use google and look up 'polynomial factorization' , so he needed help from a NG to know that?

my original suggestion given by the numerical approach is correct, as for the symbolic approach using ECM, I could well be wrong as i havent done number theory for many years, i just said it as an after thought.

i dont want any of your emails please, so dont send any to my email address as junk mail is automatically filtered out...
