Why not just post the email address of your teacher, and then we can mail your homework solution directly to him/her ?

me wrote:

There are 3 groups of coloured balls.group A consist 2 types white balls.3 types red balls.group B contains 3 types blue balls & 1 type white ball.& group C contain 1type red ball & 1 type blue ball.balls should be picked up one after the other from the group A,B,C in the same order when these 3 groups are mixed and prepare a set of group with each group has three balls.

$$\begin{aligned}A &= \{w1, w2, R1, R2, R3\} \\ B &= \{B1, B2, B3, W3\} \\ C &= \{R4, B4\}\end{aligned}$$

- 1.how many groups will have 2 white balls & 1 red balls?
- 2.how many groups will have 3 white balls?
- 3.how many groups having 2 white balls?

How can I solve the problem? Please explain it & post the detailed messege with definition step by step.
bye
