I have a notebook and find on the printout, even in presentation mode (File->Printing Settings->Printing Environment), that the notebook has the usual

In[1]  
Out[1]

In[2]  
Out[2]

etc

Does anyone know how I can prevent these for a whole notebook in version 6?

<http://reference.wolfram.com/mathematica/tutorial/OptionsForCells.html>

says 'ShowCellLabel' does this for an individual cell, but I'd like to do it for a whole notebook.

I'm using version 6, but in 5.2 there is an option 'Show In/Out names' on the kernel menu, and that turns these on/off. But in 6, that option has gone. What I do notice is 'Append name to In/Out prompts' on the

Evaluation->Kernel configuration Options

menu, but that seems to do something different - I'm not sure what, but it does not prevent the

In[1]  
Out[1]

etc in the notebook.
