I know this question (or one similar) has come up before, but I don't know if anyone has made any progress.

My understanding is that Wolfram's Mathematica book (5th edition), which is available in 5.2, is a Mathematica notebook. Some books on Mathematica 5.x are sold with the contents on a CD/DVD, and these can be installed in version 6's help system.

Has anyone managed to install the Mathematica 5 book into 6's help system?

A combination of the book in version 5.2, and any updated pages from 6, would be very useful. Even without updates it would be nice, but perhaps it is possible to update pages too

Everything from the old Mathematica book is there in the v6 documentation, it is just not arranged nicely into sections. If I remember correctly, someone has posted to MathGroup a palette with links to the sections of the Mma book in the v6 docs. You could search the MathGroup archives for it.
