There is a list of free computer algebra systems here:

http://en.wikipedia.org/wiki/Category:Free_computer_algebra_systems

I personally use (and develop for) FriCAS / Axiom. SAGE has already been mentioned, Maxima is also well known. As far as I know the others are more specialised. (Please correct me if I'm mistaken.)

Xcas is not specialised. It is probably the closest (open-source) CAS to maple (you can for example open mws file –that is old maple worksheet like maple V.5 – under Xcas and you even have a small chance to be able to run your worksheet unmodified).
