Dear Newsgroup:

I have no doubt that because of events of the Second World War; they have made a scientific monster in physics, out of an ordinary person like Einstein (i.e. highly magnifying and glorifying him).

This is because to cover negative images of events like Holocaust.

Well, OK, he made a revolution in physics, fine, but I have done it in mathematics.

Possibly NEW EXACT MATH will be several times more powerful than relativity.

But, once you want to bring Einstein into domain of debate, like $E = mc^2$ and Riccati, or even I talk about my math, they behave as if a thunderstorm hit the ground!

I suppose highly magnifying and glorifying a person like Einstein (because of his social, political and historical past); will reflect negatively on any sound and logical scientific debate about relativity.

This is because an unnatural injection and stimulating feelings (about a scientific event) will eventually result in a negative reaction. The solution is to behave naturally.

This is also true about many other similar scientists in our institutions.

Dr.M.Basti
