Facts that make Steve run..Walz thinks we went to the moon.

(1) How did Apollo get through the Van Allen Belt Steve?

Radiation is a big problem when it comes to space travel and the Earth's magnetic field concentrates this radiation into the Van Allen belts that surround the Earth. No matter what, the Apollo crafts had to go through these belts and there was no way the Apollo crafts could afford to take all the weight of lead shielding with them..

They could not have survived travelling through the Van Allen Belt without suffering from radiation sickness, or death, without a 6 feet thick solid lead shield.

=====

(2) Where are the stars?

Why are there no stars in the sky in the photographs taken from the lunar surface?

=====

(3) The video shows Neil Armstrong climbing down the ladder and stepping onto the surface. If he was supposed to be the first man on the Moon, who took the video?

=====

(4) They didn't have the computer technology in those days to get to the Moon and back. Recently China said: "The technology to get to the moon could come within the next ten years.

=====

Questions Steve won't answer

Why does the American flag appear to be blowing in a breeze?

In the vacuum of space this should not be possible.

<http://www.astrocentral.co.uk/flag.jpg>

=====

Why is there no blast crater?

When the lunar module landed it should have made a large crater.
