Don't let kookery win. Complain to the moderator(s) of the list.  
And complain often.

I say that as a moderator of a whole bunch of vaguely serious  
yahoogroups. (Several of which have witnessed these kinds of  
Bagularities.)

If the moderator(s) isn't prepared to deal with valid complaints,  
/then/ unsubscribe.

Phil

1st bug in MS win2k source code found after 20 minutes: scanline.cpp  
2nd and 3rd bug found after 10 more minutes: gethost.c  
Both non-exploitable. (The 2nd/3rd ones might be, depending on the CRTL)
