The following book seems useful for what I'm doing currently.

Author Freidlin, M. I. (Mark Iosifovich)

Title Random perturbations of dynamical systems / M.I. Freidlin, A.D.

Wentzell ; translated by Joseph Szücs

Published New York : Springer-Verlag, c1984

However the level seems to be over my head.

can someone suggest a text that deals with similar topics that is geared towards undergraduate/ lower graduate levels?

thanks all in advance
