You're saying that Greg doesn't understand elementary number theory?

....

Dude, do some research before you perform character attacks. He's a long term cryptographer with involvement in the field for the last [several?] decades. He organized various USENIX conferences and Crypto'03. He's written several published papers and is actively involved in GSM and CDMA groups. He also happens to be a VP of QUALCOMM. Saying Greg doesn't know the math is about the most untrue thing you've said yet in this thread to date.

Tom
