If you mean, how many 3's from the representation you have marked by |<-----how many 3's----->| underneath it (i.e. <0.3333333333333333.....>)

also occur (at the same place) in one of the (finite) sequences in the list of sequences, the answer is all of them, or oo, I guess depending on your mood.

Is that what you meant (by at least one of your two possible (and correct answers)?

Thanks.

Ken
