A ESP test (extra sensory perception) is carried like this:

>From a deck of cards were chosen 5 cards. These cards were seen by both the conductor of the experiment and a person. The cards were laid on the table with the back side upwards in such a way that only the conductor of the experiment knew the sequence of the cards. The conductor chosed a card and the person should then say which card it was. In a sequence of 100 experiments the person answered correctly 37 times.

Is there reason to believe that this person has special supernatural powers?
