

Mathematical ASL?

I have a deaf student in an "advanced" class. He has an interpreter rendering ASL, great.

But it's occurred to me that there may be a problem here, because I'm not speaking English in class, I'm speaking "mathematical English". For example "sequence" and "series" are synonyms in English, so I'd guess that they might be translated to ASL in the same way, but if so that would be a disaster, because they mean very different things in mathematical English.

Hence the question: Is anyone out there aware of a standardized "mathematical ASL", and if so can you tell me where to find information on the topic? Or does someone have experience/suggestions on what to do about this is general?

David C. Ullrich
