I have to state that you do **not** clearly state what you are doing.
For the most part I do not understand at all what you are meaning.
It appears to be a language problem.

You could just as well state that $x \leq y$ (or $x < y$ as for $x = y$ there obviously is no solution). And so we can say $y = x + a$ and $z = x + b$, which makes everything shorter.

Now, this does not follow, I think. At least, it is not clear how you get here.
