Ken,

I misread what you wrote at first. You're saying that the English version of the Borsuk/Szmielew book (which I have) is different from the earlier work in Polish, in which they set up a system based only on points, betweenness and equidistance. I see.

That's really interesting. And too bad that it's in Polish. I'd love to see that approach in English.

Thanks again,  
Chris
